## ABSTRACT OF THE DISCLOSURE

5       A computer-implemented method of processing a
document provides a user with a plurality of nested
test modes for creating, reviewing and retrieving a
plurality of different document configurations
represented by different document data sets.  The
10   nested test modes are activated upon user request and a
starting data set of the document is stored on a memory
and restored after leaving the test mode.  By nesting a
plurality of test modes, the user can create a
plurality of different configurations of a document and
15   easily retrieve the data of every one of these
configurations.
